

Water Softening Agent

The Water Softening Agent is a specially formulated solution that softens hard and very hard water and prevents mineral buildup, allowing your panels to operate at their maximum capacity. It has an action time of about 20 minutes.

Any cleaning method

- Dilute the product, at the recommended dilution for your case, directly in the water tank or deposit. The longer the product is mixed, the better results will provide.
- The WSA is compatible with all other Chemitek products.
